

TXN-0 Official White Paper (June 2025)

Project Overview

TXN-0 is not just another crypto token — it is a living symbol of the countless missed moonshots, rugged dreams, and shattered hopes that define the emotional history of crypto traders worldwide.

We are the glitch born from these losses: a stealth coin designed not for hype, but for redemption. TXN-0 stands as a collective comeback, where every “transaction that never happened” now has a home.

Core Narrative

TXN-0 exists to serve:

- Those who were rugged.
- Those who missed the moon.
- Those who watched whales dominate and felt powerless.

We are the glitch in the system — quietly alive, quietly waiting.

No flashy promises, no pump-and-dump games.

Just a raw, open experiment in second chances.

Tokenomics (Updated)

- Total Supply: 10,000,000,000 TXNF
 - Owner Share: 25% (10% locked for 3 months)
 - Liquidity Pool: 70% (locked on PinkLock)
 - Airdrop Reserve: 5% (for Proof of Loss airdrops + campaigns)
-

Liquidity & Trust

- Liquidity is fully locked on PinkLock.
- Additional liquidity injections are transparently locked and publicly verifiable.

- No hidden developer wallets, no rug switches.
We operate with radical transparency — every lock, every adjustment is announced and linked publicly.
-

Airdrop Narrative

We reserve 5% of the supply to reward those who share their personal stories of crypto loss. These airdrops are not gimmicks; they are symbolic — a way to bring pain, experience, and resilience into the fold.

If you've been hurt by the markets, TXN-0 was made for you.

Expected Glitches Ahead

(No promises. Just signal.)

TXN-0 doesn't follow a roadmap — it leaves traces. If the chain holds and the glitch grows, here's what may quietly surface in the next 90 days:

1. Finalize indexing on CoinGecko and CoinMarketCap
2. Deploy decentralized airdrops (via Proof of Loss submission system)
3. Expand meme campaigns and narrative-driven outreach
4. Explore micro-listings and low-volume exchange integrations

5. Lock new liquidity additions and publish proof transparently
-

Closing Statement

TXN-0 is the glitch they never saw coming — a project born not out of ambition, but out of memory.

Together, we turn loss into signal, disappointment into community, and pain into movement.

We are the transaction that never happened.

Until now.
