TXN-0 Official White Paper

Project Overview

TXN-0 isn't here to sell hope. It's a minimal, on-chain artifact for everyone who's worn the losses of crypto: missed entries, rugged exits, timelines that never landed. TXN-0 turns that emotional residue into a verifiable trail — a token, an agent, and a ledger you can audit.

Core Narrative

No theatrics. No promise machines. TXN-0 is a quiet signal for:

- People who were rugged
- People who "almost made it"
- People who still show up

No roadshow, no grind servers, no fake volume. Just receipts.

The TXN-0 Agent

TXN-0 runs on an autonomous agent that executes a **Proof-of-Loss** flow end-to-end:

1. **Story Intake** → Users submit real loss stories
2. **Validation** → The agent filters spam/duplicates and normalizes wallets
3. **Airdrop Execution** → If eligible, the agent sends tokens and posts public proof
4. **Public Trace** → Every transfer is visible on-chain, and social posts mirror the event

Transparency:

- **Ledger of Trust:** The ledger is the blockchain itself. Follow the airdrop wallet: 0x3Ea9493D1d9F90e22693596671C3E02b001D0E8c
- **Public Feeds:**
  X: [x.com/_TXN0](x.com/_TXN0)
  Telegram: t.me/TXN0Official

The agent keeps the ritual honest and reproducible. No backdoors, no "DM the dev," no handpicked favorites. One story at a time, same rules for everyone.

Token Information

- **Symbol:** TXNF
- **Network:** BNB Smart Chain (BEP-20)

- **Contract:** 0xcb81CB9F47C70f88A6EebD007e31f9c27b3bd9b1

- **Total Supply:** 10,000,000,000 TXNF

Tokenomics

- **Owner:** 25%

- **Airdrop Reserve:** 5% (Proof-of-Loss)

- **Liquidity:** 70%

Locks & Proofs

- **Liquidity Lock:** [PinkLock record #1321047](#) — active

- **Owner Lock:** [PinkLock record #1321033](#) — active at launch; renewal decisions will be public

TXN-0 prioritizes liquidity lock for baseline trust. The owner lock was placed at deployment to reinforce fairness, and its renewal status will be disclosed transparently.

Airdrop Narrative

Airdrops are symbolic acknowledgements of resilience, not payouts for hype.

- Submissions are scored by the agent; duplicates/bots are filtered

- Allocation caps prevent abuse

- Every drop emits an on-chain receipt (TX hash), visible in the Ledger of Trust

Expected Glitches Ahead

This isn't a roadmap, but a signal:

1. Broader index listings (CoinGecko / CMC)

2. Expanded agent throughput and audit tools

3. Narrative-first outreach with minimal media, public receipts

4. Ongoing lock hygiene and public proofs

Disclaimer

TXN-0 ($TXNF) is an **experimental digital artifact** on Binance Smart Chain. It is not financial advice, not an investment vehicle, and not backed by a team or company.
All content is for informational and entertainment purposes only. Participation is entirely at your own risk; cryptocurrencies can go to zero.

Nothing here is real. Nothing here is fake. The glitch is yours to believe — or not.
